

What's hot at UIP50 Monaco

By **J.J. Guex MD**, Chair Organizing Committee
and **E. Rabe MD, PhD**, Chair Scientific Committee

Endovenous thermal ablations are HOT, Endovenous Laser and Radio Frequency have been extensively analyzed during the last years and about 120 free papers will be presented on these topics. All new technologies will be addressed: new fibers, new probes, new generators, and new wavelengths as well.

Although not physically HOT, sclerotherapy will also be a MUST at UIP50 since about 60 papers have been selected on this topic.

UIP50 extras :

- UIP50, the XVI World Meeting of the Union Internationale de Phlébologie gathers all specialists interested in phlebology and presents all aspects of Phlebology from **A** as in **A**blation to **Z** as in **EnZ**ymes.
- **A NEW DIMENSION AT UIP50** - Whatever your homeland, the UIP is YOUR forum. This year, societies and chapters of the UIP have been given the opportunity to organize their own sessions. If you want to meet with your fellow citizens or wish to introduce them to your colleagues of other countries, it will be the session to attend.
- **SOCIAL PROGRAM AT UIP50** : A gala dinner featuring *Music and Dance of the 50's*. Celebrating the 50th anniversary of the Union requires some pomp and extravaganza, prepare to dine in "la Salle des Etoiles", a place where the best stars have sung and where the stars twinkle to you, since the ceiling rotates and opens on the sky. Four course dinner, two orchestras, singers, dancers, attraction and dance floor. Black tie recommended for this unique event (ticketed, limited number).

The final program is now available on the website:

www.uip2009.eu
where you may also  finalize your registration online.

Contact:
uip2009@publiccreations.com

Deadline for early registration: **June 30th**

Breaking news

- ▶ **A novel pharmaco-mechanical catheter ablates saphenous trunks without anesthesia.**

«Thus far our results are comparable to endovenous laser or radiofrequency ablation. The procedure is done without tumescence, only local anesthesia and takes 15 minutes»

Steven Elias (USA) says.

- ▶ **Plenary session on Wed, September 2nd, 09.00 - 09.45**
